WHO AM I?

I am a young programmer and Linux user who has an outsized level of pride in my Neovim configuration. Take a look here, it is deployed via Ansible over yonder. I currently write most of my code in Lua for configurations and Rust for actual full on programming. I am highly invested in reproducibility, expressed via Docker and Ansible (and lately some Nix). I currently use Arch Linux (btw) as my operating system and live almost entirely on the command line. This resume, for instance, was written in vim and compiled with Tectonic. Source for it here.

Ansible
Rust
Lua
Git
CI/CD
Linux
Python
Docker

EXPERIENCE

2022 - 2023
part time

Systems Integration Intern
Security Service Federal Credit Union

I was primarily involved with pipelines and overhauling legacy projects. I overhauled the in-use pipelines to "Pipelines V3" with significant modularity improvements and major performance gains. The average speedup was 8x, with the highest speed up being 20x. These pipelines were responsible for testing, building, and deploying code at SSFCU.

```
C# / Powershell / Azure/Github CI/CD / Bash / Docker / Windows Server
```

2021 – 2022
part time

Junior Systems Administrator
Vircio

I introduced Ansible automation as part of a project to leave the legacy CFEngine automation platform behind. I created Ansible playbooks that managed approximately 800 hosts in various customer locations along with implementing Gitlab CI/CI to lint and run these playbooks on git integration. All systems were Linux based that I automated and worked on.

```
Linux / Bash / Ansible / CFEngine / Networking / Bind9 / Gitlab CI/CD
```

2019 - 2020
part time

Information Analyst II Intern
Booz Allen Hamilton

I was on a team doing machine learning work. I helped with applying the target dataset we used, filtering, and gathering of data for the machine learning system in Python.

```
Python / Linux / Elastic Search / Kibana / Logstash / Bash
```

EDUCATION

2024 – FUTURE

Finishing Bachelor's Degree
University of Texas at San Antonio

After my current semester at San Antonio College I intend to go back to UTSA and get my full bachelor's in business with a cybersecurity specialization starting spring of 2024.

2021 - PRESENT

Associates in Business
San Antonio College

I came to SAC to get my prerequisite courses finished and have qualified for an associates degree in business which I will receive fall of 2023.

2019 – 2021

Seeking Bachelor's Degree in Business
University of Texas at San Antonio

I began on my path to getting a Bachelor's Business degree with a specialization in Cybersecurity in fall of 2019. I left in 2021 to San Antonio Colleges to finish out prerequisite courses and get my associates degree.

PROJECTS

Squad Server Automation
Squad Server Deployments and Management
Blog Static Site Generator
Rust Code Powering a Blog
Avents
Python Asynchronous Event Framework

SOME CODE I'VE WRITTEN

- Test Overhauls For Neogit
- Injecting Cmake Variable into Neovim
- Modifying ABI Call in Silicon.nvim
- Adding the Azure Pipelines Language Server to Nvim-Lspconfig
- Enabling Better User Configuration for Hurl
- A Templating System Written in 100% Pure Bash
